HOMEWORK 08

Sensor Systems

Due date

Squad A: Thursday, November 12, 14:30
Squad B: Sunday, November 15, 14:30

8. Temperature sensor over I2C (full resolution, interrupt)

The objective of this project is to read the temperature measured by the LM75 sensor on the POLIMI board through the I2C interface, now using all 11 bits: read both the MSByte and the LSByte of the temperature register and convert them into a temperature in °C with 3 decimal places.

The value must be sent to a remote terminal every 1 second, using a timer interrupt to set the timing.
