HOMEWORK 02

Sensor Systems

Due date

Squad A: Thursday, October 1, 14:30
Squad B: Sunday, October 4, 14:30

1. Toggle the green LED on each finger snap

Modify the status (switch on / off) of the NUCLEO green LED, every time you snap your fingers. (Use the pin connected to the microphone as an External Interrupt)

> ***Hint:*** *look at the files "Green PCB board schematic", "Nucleo Schematic" and "Nucleo user manual" on Webeep in "Material/Laboratories/Documentation" and find the STM32 pin that connects to SND_IN.*

> ***Hint:*** *check whether the input has an analog (hardware) debouncer. If it does not, a single snap may fire multiple interrupts: make sure your code deals with this.*
