HOMEWORK 06

Sensor Systems

Due date

Squad A: Thursday, October 29, 14:30
Squad B: Sunday, November 1, 14:30

6a. ADC single acquisition (interrupt)

The objective of this project is to acquire the voltage of the potentiometer every 1 second and send this value to a remote terminal. The ADC will be used in interrupt mode.

6b. ADC triggered by a timer, shown on the LCD

The objective of this project is to acquire the potentiometer voltage using a timer to trigger a conversion at a regular rate of 1 Hz, and show the value on the LCD both as a number (three decimal digits, top row) and as a bar (bottom row: empty at 0 V, full at 3.3 V), as shown below.
